# AREA EXPORT

---

Within ENVI5ION you can export custom areas for use in other applications.

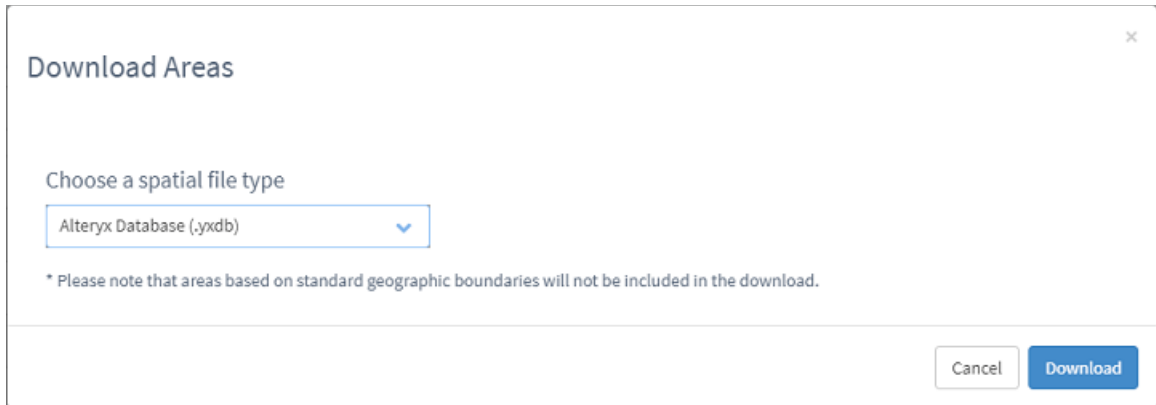

It should be pointed out that you cannot download areas based on standard geographic boundaries.

1. Click the **Area Export** tool.

2. Select the Area(s) you wish to export by clicking the checkmark next to it in the list.

3. Click on the gear button  located above the list and choose **Download**. A dialog box appears.

Download Areas

Choose a spatial file type

Alteryx Database (.yxdb)

\* Please note that areas based on standard geographic boundaries will not be included in the download.

Cancel Download

4. In the **Choose a spatial file type** menu, select the appropriate spatial file type
5. Click **Download**.
6. To download the file, click on the name of it in the **Results** list.
