

Ranking Variables - Variable

Provides information about some behavior (or behaviors) that are present in an area where a single variable may be present. It presents a comparison between two behaviors or characteristics in a given area.

Ranking Variables | Variable

Variable: DemoStats 2020 - 2020 Household Population 15 Years or Over for Educational Attainment - Above Bachelor's

Threshold: 25%

The **Variable** that the report is ranked against is at the top of the report.

The **Threshold** selects the top percentage of the population or households. In this example, the threshold is set to 25% and will output the top 25% of the dissemination area that are encapsulated by the variable. In this case, it is the Household Population 15+ who have an educational attainment above the Bachelor's level.

	%	Base %	Index
Occupied Private Dwellings by Tenure			
Total Households For Tenure	100.00	100.00	100
Owned	47.72	66.22	72
Rented	52.28	33.78	155

This report provides information about population or households that are present in an area where a single variable may be present. It presents a comparison between two characteristics in a given area. In our example, **52.28%** represents the estimated proportion of the household population 15+ in the top 25% of DAs in Toronto that have an educational attainment above the bachelor's level and **Rent** their dwellings. The Index column indicates whether the top 25% of the DAs are above or below average for each variable. With an Index value of **155**, the household population 15+ in Toronto that have acquired a bachelor's degree or above are also **55%** more likely to Rent their dwellings.

You could infer from this that those that have a higher level of educational attainment in Toronto are more likely to rent their dwellings.

Area of Interest: Toronto, ON

The **Area of Interest** indicates the geographic extent for the report.

%: The percentage of the population or households in the top 25% of Dissemination Areas (based on the threshold that was chosen when running the report) that comprise the variable.

Base %: The percentage of population or households in the Area of Interest that comprise the variable.

Index: A measure of how similar or different the top 25% of Dissemination Areas (based on the threshold that was chosen when running the report) are from the Area of Interest. An Index above 100 or below 100 indicates that the variable is above or below average respectively, in the threshold level of Dissemination Areas, compared to the Area of Interest.
